## Microsoft Azure Cloud Server Migration Services

---

**Moving your organization** from desktop-based business processes to Azure cloud servers including configuring all needed business applications and hardware to support the business.

While each services engagement we undertake is customized based on specific client needs, available staff and environment, following is a list of what **can** be included in a typical Lead I.T. **Azure Server Migration Service Plan**:

### Initial Discovery and Configuration

- Needs assessment
- Confirmation of business applications included in migration
- Review of hardware configurations including printers and other peripherals impacted by the server migration
- Review of end user and developer's requirements, recommendations and configurations
- Review of all software application configuration specifics

### Microsoft Azure Cloud Setup

- Set up and configure Microsoft Azure servers per discovery
- Establish and confirm connectivity
- Apply security requirements

### Testing and Proofing

- Install software
- Configure per organization's needs
- Identify test users
- Test/modify/retest/deploy

### Documentation and Maintenance

- Document configuration
- Establish maintenance plan
- Schedule backups
- Other work as required

**We look forward to discussing these services with you further.**

Please **BOOK A MEETING HERE** by visiting our **Microsoft Bookings page** or call us at **971-337-2428**.
